

# Skills Academy

## Learning Management System

“The Skills Academy constantly works with employers to understand their issues, challenges and needs, and we have identified that many of them face a challenge to deliver, monitor and record their training and development in a consistent manner.

easily accessible

Many have online learning sourced from several suppliers where they access the provider’s website and the recording of learner results is held within that package. This means training records become dispersed and there are resulting implications, not least in terms of meeting the regulatory requirements for evidencing training and competence.

supportive training

The ideal is a single platform for all their training, delivery, monitoring and recording with a link from their intranet site to a learning management system. We are confident that our offering provides such a solution”

Sylvia Perrins,  
CEO, Skills Academy

### E-learning System

We supply, host and support the Learning Management System (LMS) on the world renowned Moodle platform on highly robust web servers. We use instant notification monitoring tools to warn us of network or server issues affecting availability, and our support team can react quickly to keep the system fully operational.

To make your LMS material really effective we can:

- upload pre-packaged, tried and tested Skills Academy e-learning content
- offer a 'rapid conversion' service whereby your existing training materials may be converted quickly and efficiently for online use
- provide the appropriate training and support to enable your staff to create online learning materials
- provide general user training to enable your trainers and administrative staff to best use the system and to support your learners
- connect and store e-commerce system if you wish to sell access to your materials to 3rd parties

## Design Match

Our web designers can copy the design from your existing web sites in order to apply a consistent look and feel across the LMS and any online storefront and other systems. That way, your own websites, LMS and e-store may all share the same corporate design.

## Customer Relationship Management

We have developed a specially refined Customer Relationship Management (CRM) system that only has data associated with the LMS.

This allows centralised reporting, pulling user completion data from the LMS and allowing you to report on:

- learner course completions
- course attendance, time left and grade statistics
- current learner listings by course

## Your benefits

- Online training easily accessible in one place
- Consistent branding and look
- Helps to evidence regulatory requirements for training and competence of employees
- Ability to monitor and report against training completion and related assessments
- High speed conversion of your existing training material
- Supportive training to use the LMS
- Easy access to high quality Skills Academy online products
- Cost-effective pricing
- The credibility and quality of service, support and assistance that comes from the Skills Academy

cost effective

single platform
